2011

“Creativity is inventing,  
experimenting, growing,  
taking risks, breaking  
rules, making mistakes,  
and having fun.”

Mary Lou Cook – American community activist, calligrapher and author

## Environment

In our sector, we spearheaded the campaign for a better environment, making it our task to offer our customers not only the best, but also – in the interests of a sustainable, light environmental footprint – the most ecologically friendly lighting technology. Our clear understanding of our responsibility towards man and the environment gave rise to our commitment, both to use energy-efficient lighting increasingly in our products and to campaign incessantly for its use. In this way, we wish to make a significant contribution towards a permanent reduction in CO<sub>2</sub> emissions and its subsequent environmental damage.

### Lighting the future: our LED technology

Our LED technology is the first choice for decorative illumination and, we at MK Illumination are investing a great deal of time and money in its continued development. Just like MK, our customers are also committed to this „light of the future“ because it consumes extremely low energy levels, has a negligible effect on the environment and is cost-effective.

### The new „Organic Materials“ generation

The proportion of „organic materials“ in our production is rising month-on-month. The so-called „renewable raw materials“ are based completely, or in an agreed proportion, on agricultural raw materials such as (amongst others) starch, sugar, vegetable oils and cellulose (wood, natural fibres, straw) as well as special organic molecules like lignin or rubber. The proportion of agricultural raw materials in each Organic Material is at least 20%. The expression „organic materials“ is still relatively young. At MK we’re using the term as a collective label to describe the new organic based materials used to create our new MK Organic range.

The „organic materials“ used in our concepts are made up of considerably more than 20% wood. We justifiably refer to these materials as organic because:

- a considerable proportion of the material is derived from renewable sources
- the proportion of petrochemical source materials is significantly reduced
- the net effect on the planet’s CO<sub>2</sub> levels is markedly better than with standard polymers
- they are a real-life contribution to resource-saving sustainability

### „Good“ is not good enough!

In the future we will work with wood sourced from independently-verified sustainable forestry located in an area expected to be within 50km, which shall also have the PEFC certificate. (PEFC – Programme for the Endorsement of Forest Certification Schemes). We give our word on this.

With our loving attention to detail and the exclusive artistry of our skilled workers, we are able to create bespoke displays and high-quality designs. This is encapsulated in the Limited Series.

The creativity of our craftsmen helps to transform our ideas into top-quality products. From the smallest of ideas we are able to create pieces of art, one-off creations – made with feeling to meet the discerning needs of our customers. Since 2009, we have been working high-quality crystal raindrops and crystal pearls into our three-dimensional indoor and outdoor lighting displays. These products have become the real gems of our collection and our customers have fallen in love with them – reason enough to continue developing this range. Our inspiration has been found in the style collections „Glory“ (the glamorous) and „Joy“ (the playful).

### 2011: A new relationship

„Limited“ products are an expression of particularly high-quality taste – glamorous, exquisite, and stylish. For the coming season, we shall be combining our „Limited“ displays with new Organic Materials, produced using raw materials from sustainable sources.

### The fabrics which make new decorative dreams come true

Yet another innovation this year is the creative combination of our hand-made, three-dimensional displays with selected high-quality fabrics. Available for indoor use only. We use only materials which correspond to European safety standards. (B1, M1)

### Honest Craftsmanship

The central birthplace of our countless design ideas is right next to our R&D department – in the in-house design office. Our motto “everything under one roof” is both the cornerstone and quality seal for our unique and distinctive style. Each season in a production area of more than 6,000 m<sup>2</sup>, up to 180 employees manually model and manufacture our motifs. Each motif is then checked with great precision to ensure they comply with European safety standards before they are allowed to leave the premises and be used in creative displays. To us, it is a natural business initiative to constantly and purposefully train and develop such manual skills. This is the only way to create unique products that meet the highest design standards.
